

**ArchitEX™**  
Structural Profiles & Structures

## Structural Product Guide

Global leaders in the supply of Engineer  
Designed Fibreglass Reinforced Plastic (FRP)  
Structural Profiles and Solutions

The Treadwell team is delighted to introduce the latest revision of our ArchitEX™ Structural Product Guide, showcasing the largest range of Fibreglass Reinforced Plastic (FRP) profiles in the market and the ultimate tool for designing FRP structures.

The data in this FRP Structural Product Guide has been collated to ensure that engineers and architects have the ideal reference available to them while designing structures that incorporate FRP Pultrusions.

While this guide offers a huge resource of information and statistics relevant to FRP Structural profiles, it is impossible to embrace the flexibility and constant evolution of the ArchitEX™ FRP composite range in one publication. To ensure that you have the most up to date information on the ArchitEX™ range of profiles and applications or to simply draw on our team's experience in this unique industry, contact us via the relevant numbers or visit [www.treadwellgroup.com.au](http://www.treadwellgroup.com.au)

This product guide is also available online, so if you are concerned that your copy may not be the latest, you can request an updated hardcopy or download it at [www.treadwellgroup.com.au](http://www.treadwellgroup.com.au).

### A BRIEF HISTORY

Treadwell Group is one of the most established names in the supply of Access Systems throughout Australia. Our centrally located Adelaide fabrication facility, coupled with our second to none distribution network across Australia, and our commitment to quality and testing, allows our technical staff to provide engineering and design assistance for any project.

With a broad history of installation in a wide range of challenging applications, including industrial process plants, mining applications, marine and coastal environments, as well as public infrastructure, Treadwell has the experience to help you specify the right resin systems and products every time.

If you have any unique design problems, chances are we've encountered something similar before. Get in contact today.

# ArchitEX™

## Benefits of FRP Composite

- Strong
- Lightweight
- Corrosion resistant
- Dimensionally stable
- Low maintenance
- EMI/ RFI Transparent
- Low thermal
- Electrical conductivity

## Colour Matching

We can match any colour you need.

## Scope of Shapes

Easy integration to various parts due to the capability to essentially shape any item with a constant cross section which can be pultruded.

## Composite Design Engineering

A standard shape customised into a pultrusion by modifying the resin or reinforcement to achieve a particular customer need.

## Optimising Resins

Standard resins can be modified or special resins can be used to maximise performance of the pultrusion in challenging environments, such as those found in high temperature or extremely corrosive areas. Typical resins include polyesters, vinylesters, PVC, epoxies, phenolics, urethanes and blends.

## Choice of Reinforcements

The type, form, placement and quantity of reinforcements can be customised to optimise economy, develop ascribed strength and create or enhance other physical characteristics of a pultruded part. Typical reinforcements used include glass or carbon fibres in multifilament strands, mat (long fibres held together with a resinous binder) or stitched fabrics.

Oil and Gas

Water and Waste Water

Mining and Minerals

Aquaculture

### Core Materials Options

Treadwell provides a range of core material options with comprehensive experience in pultruding over various materials including foam, balsa, polyethylene and aluminium.

### Section One: Introduction to Pultrusions

- 06 Composition of Pultrusions
- 07 Resin Systems
- 08 The Pultrusion Process
- 09 Environmental Conditions

### Section Two: Coupon Properties

- 10 ArchitEX™ Profiles
- 11 Typical Properties of Threaded Rod/Nuts
- 12 Typical Coupon Properties of Flat Sheet
- 13 Comparison

### Section Three: General Tolerances

- 15 Cross Sectional Tolerance
- 17 Straightness
- 18 Twist

### Section Four: Sectional Properties

- 21 C Section
- 23 I-Beam
- 25 WF-Beam
- 26 Double Web Beam & Unequal Leg Angle
- 27 Equal Leg Angle
- 29 Rectangular Hollow Section
- 30 Circular Hollow Section
- 31 Solid Bar
- 32 Circular Round Bar
- 33 Embedment Angle
- 34 Square Hollow Section

#### Quality Policy

Quality is at the forefront of Treadwell Access Systems' working practices. With over 15 years of manufacturing to the highest quality standards, Treadwell Access Systems prides itself on its implementation of strict quality control measures, and strives to supply products that surpass customers' expectations. The company works on a policy of continuous improvement.

#### Environmental Policy

Treadwell Access Systems is conscious of the impact it has on the environment and its associated responsibilities. The company is committed to ensuring its operations satisfy both legal obligations and moral duties. Treadwell has been committed to sustainability for many years and is not just responding to current trends.

### Section Five: Beams - Allowable Uniform Loads

- 37 Allowable Uniform Loads Tables
- 40 Technical Data Tables - C Section
- 51 Technical Data Tables - I-Beam
- 62 Technical Data Tables - WF-Beam
- 70 Technical Data Tables - Double Web Beam
- 72 Technical Data Tables - Rectangular Hollow Section
- 75 Technical Data Tables - Square Hollow Section
- 82 Technical Data Tables - Interlocking Deckboard
- 86 Technical Data Tables - Flat Sheet

### Section Six: Columns

- 93 Columns

### Section Seven: Columns - Allowable Concentric Axial Stresses and Loads

- 96 Technical Data Tables - Angle
- 104 Technical Data Tables - I-Beam
- 114 Technical Data Tables - WF-Beam
- 124 Technical Data Tables - Double Web Beam
- 126 Technical Data Tables - Square Hollow Section
- 137 Technical Data Tables - Rectangular Hollow Section

### Section Eight: SPACE GASS Input Guide

- 138 SPACE GASS Input Guide

### Section Nine: Corrosion Guide

- 140 Corrosion Guide

## Introduction to Pultrusions

### Composition of FRP Pultrusions

#### What are pultrusions made of?

Pultrusions are composed of two key elements; glass fibre products and resin formulations. The glass contributes its inherent tensile flexural strength while the addition of resin ensures impact and corrosion resistance.

The glass fibre component normally consists of two different arrangements: glass roving which is unidirectional, and continuous mat which can be arranged in different ways to provide bi-directional stability as well as contributing to longitudinal strength properties.

Another integral part of a pultrusion is the surface veil which provides enhanced UV protection, corrosion resistance and aesthetics.

#### Roving

Roving is made up of fibreglass unidirectional filaments which are manufactured on continuous rolls. Roving is usually the principal element in a pultrusion, comprising 50% - 70% percent of the total glass content.

While supplying the necessary strength to pull the profile during manufacture, the roving also provides unsurpassed tensile and flexural properties. The percentage of roving in a pultrusion is the major variable in section stiffness.

#### Mat

Continuous strand mat constitutes the remainder of the glass reinforcement used in the pultrusion process. This would typically be 30% - 50% of the total glass content. It is important to differentiate between continuous strand mat and other hand-laid-up or press-moulded processes that utilise short chopped fibres. The mat that is used in the pultrusion process requires good tractive strength to ensure that it enters the die properly.

Fibreglass continuous strand mat is predominately applied to obtain the desired transverse properties of the product, whereas roving provides longitudinal stability to a section. Roving lacks the required lateral cohesion that is also an essential element in maintaining the maximum strength from a profile, it is the continuous strand mat that is principally responsible for this.

#### Surface Veil

Veils are utilised to enhance the surface properties of pultruded profiles. Most widely used today are synthetic variations which enhance the UV resistance properties and aesthetics. The veil also increases the resin content of the surface of the pultrusion which provides added corrosion resistance. The veil protects the section against moisture and therefore the mechanical characteristic values remain unchanged for sustained end-use conditions.

### Cross Section of Pultrusion

### Resin Systems

When choosing a resin type for your application, we highly recommend you consult with us in relation to the application to ensure the correct resin is specified. Considerations such as corrosion, environment, temperature, fire resistance, smoke and smoke toxicity requirements must be taken into account, and will dictate which resin system should be utilised for optimum performance over time. Below is an overview of the resin systems offered in the ArchitEX™ range.

**O-Series®** is an architectural grade polyester resin system with an intermediate level of chemical resistance, and is a good choice for commercial or light industrial applications, especially in areas where moisture is prevalent. O-Series® is often utilised for public infrastructure applications where it has been proven to outperform traditional timber decking products. This system is available with or without fire retardant additives.

**I-Series®** is a premium isophthalic resin system. This system provides an intermediate level of chemical resistance and is the correct choice for areas subjected to splash and spill contact with harsh chemicals. This system is an excellent general-purpose resin and is a more favourably priced alternative to the vinylester system. This system has a flame spread of 25 (approximately 15) or less.

**V-Series®** Vinylester resin is the most high quality chemical resistant system offered in the industry and has been developed for use in environments where FRP products are subject to frequent and direct contact with the harshest of chemical, including a broad range of acids and caustics. This system has a flame spread of 25 (approximately 15) or less.

**P-Series®** The phenolic resin system is a system designed specifically for use where fire resistance, low smoke and low toxic fumes are critical. P-Series® is typically used in offshore applications and confined spaces where such criteria are an absolute necessity. This system is tested in accordance with ASTM E-84. Various products also conforming to US Coast Guard Approvals, Level 2 and 3, are also offered by Treadwell. This particular resin system has a flame spread rating of 5 and a smoke density rating of 5.

### Standards Resin Systems Comparison Chart

## Introduction to Pultrusions

### The Pultrusion Process

#### How the Pultrusion Machine Works

Pultruding is the process that is used to form continuous structural profiles out of fibreglass and resin composites. The process is performed by a pultrusion machine. The first pultrusion process was developed in the mid-1940s with further major development and greater recognition in the mid-1950s.

The term pultrusion was derived from a combination of the word pull and extrusion. There are some parallels between the two processes given that they both produce continuous profiles and involve some sort of forming die. The main difference being that the pultrusion process utilises a series of pullers, which draw the product through the entire process as compared to extruding, which uses pressure or a pushing force.

The pultrusion process commences with fibreglass roving being pulled off rolls, through a guide and then being combined with the continuous strand mat. It is this fibreglass component that provides the resistance to tension that is necessary in the pultrusion process. The raw fibre is pulled through a series of guides or rollers and then enters a resin impregnation bath. The resin is usually a thermo-setting resin.

Now that the fibres are thoroughly 'wetted out' with the resin, they pass through a series of tooling which arranges the fibres correctly and removes excesses of resin. This set of tooling and guides is referred to as the pre-former. At this stage, the surface veil is added.

The uncured composite is then pulled into a heated die which commonly consists of 2-3 differing stages of temperature which initiate the curing of the resin component. The profile that exits the die is now a cured pultruded fibreglass reinforced plastic composite.

It is this rigid profile that is gripped further down the line by the pulling mechanism which provides steady and continuous tractive effort. After passing through the pullers, the FRP profile reaches a cut-off saw. The saw cuts the pultrusion to the desired length without slowing or halting the process.

This way high strength and light weight profiles can be created from fibreglass reinforced plastic to virtually any length required.

#### Pultrusion Machine

## Environmental Conditions

### Temperature

When designing a structure that is going to incorporate FRP sections, it is essential to consider environment changes such as temperature. Continued exposure to elevated temperatures can cause polyester and vinylester fibreglass pultrusions to lose certain percentages of their properties.

These tables shows the percentage of property retention when exposed to certain continuous temperatures.

### Ultimate Stress

Temperature	Polyester	Vinylester
37°C	85%	90%
51°C	70%	80%
65°C	50%	80%
79°C	Not Recommended	75%
93°C	Not Recommended	50%

### Modulus of Elasticity

Temperature	Polyester	Vinylester
37°C	100%	100%
51°C	90%	95%
65°C	85%	90%
79°C	Not Recommended	88%
93°C	Not Recommended	85%

### Weathering

As with most plastic products, fibreglass reinforced pultrusions will undergo some form of visual degradation when exposed to outdoor weathering.

Typically, the surface of ArchitEX™ Pultrusions have good water and ambient temperature resistant properties but are susceptible to ultra-violet(UV) light. UV light is the light spectrum between 290 and 400 nanometres. This light has a higher energy and causes significant degradation to polymers by breaking chemical bonds or starting chemical reactions. The fire retardant polyester formulations contain a halogen which makes these plastics typically more susceptible to UV light degeneration.

Deterioration that has been caused by UV light can be identified by 'fade' and 'yellowing' on the pultrusion surface. Over an extended period of exposure, the actual glass fibres closest to the surface will become exposed. This state is known as fibrebloom and does not directly or immediately affect the physical properties of the section.

Treadwell adds a UV stabiliser into the resin formulation. This is especially important due to the extreme exposure that our products experience in the Pacific region. Also, to ensure that our pultruded products endure a protracted lifespan, we use high quality polyester surface veils to ensure that the structural component of the composite is protected as well as possible from damaging and corroding elements.

The ArchitEX™ range is also offered with a range of exterior coatings to enhance aesthetics. If a Urethane coating is applied, this will also provide a hugely effective protection barrier to outdoor weathering.

## Pultrusion Availability

Treadwell is arguably the largest stockist of FRP pultrusion products in Australia. We always stock a comprehensive range of I-Beam, C Section, Hollow Section and Angle products which are commonly in high demand. Due to the consistent and rapid evolution of the fibreglass pultrusion market, we are continually reevaluating our range of stocked products to ensure that our holdings accurately reflect customer demand.

We utilise efficient transport networks across Australia to ensure rapid delivery to remote locations and stock products in most capital cities.

Our complete range of products available is listed in the Section Properties tables. To obtain price and availability or find out if the product you require is a stock item, call Treadwell on 1800 246 800.

## Coupon Properties

### ArchitEX™ Profiles

The test results for typical coupon properties of Treadwell’s structural fibreglass profiles are shown below. Properties are obtained via the ASTM test method shown. Ultraviolet inhibitors and synthetic surfacing veils come as standard.

Mechanical Properties	ASTM	Units	Value
Tensile Stress, LW	D-638	MPa	206.8
Tensile Stress, CW	D-638	MPa	48.2
Tensile Modulus, LW	D-638	GPa	20.7
Tensile Modulus, CW	D-638	GPa	5.5
Compressive Stress, LW	D-6641	MPa	206.8
Compressive Modulus, LW	D-6641	GPa	20.7
Compressive Modulus, CW	D-6641	GPa	6.9
In-Plane Shear Modulus	D-5379	GPa	3.1
Interlaminar Shear Strength	D-2344	MPa	31.0
In-Plane Shear Strength	D-5379	MPa	68.9
Pin-bearing Strength, LW	D-953 <sup>a</sup>	MPa	144.8
Pin-bearing Strength, CW	D-953 <sup>a</sup>	MPa	124.1

Thickness of Profile (mm)	ASTM Required	Strength (kN)
t=9.525mm	TBC	2.9
t=12.7mm	TBC	4.0
t=19.05mm	TBC	5.6

#### Pull-through Strength Per Fastener

\*The pull-through strength per fastener corresponds to the thickness and the ASTM required.  
For example, when ASTM required is D-790 and t= 9.525mm, the pull-through strength is 2.9kN.

Physical Properties	ASTM	Units	Value
Barcol Hardness	D-2583	----	45
24 Hour Water Absorbtion	D-570	% max.	0.45
Density	D-792	g/cc	1.72-1.94
Coefficient of Thermal Expansion, LW	D-696	10 <sup>-6</sup> mm/mm/°C	12
Glass Transition Temperature	D-4065	°C	83

Electrical Properties	ASTM	Units	Value
Arc Resistance, LW	D-495	seconds	120
Dielectric Strength, LW	D-149	kv./mm	1.37
Dielectric Strength, PF	D-149	volts/mil.	200
Dielectric Constant, PF	D-150	@60hz	5

#### Fire Retardant Polyester and Fire Retardant Vinyl Ester Structural Profiles:

Flammability Properties	ASTM	Units	Value
Tunnel Test	E-84	Flame Spread	25 max.
Flammability	D-635	----	Nonburning
UL	94	VO	----
NBS Smoke Chamber	E-662	Smoke Density 600-700	----

CW = Crosswise

LW = Lengthwise

PF = Perpendicular to Laminate Face

### Typical Properties of Threaded Rod / Nuts

Treadwell Group's threaded rod and nuts are manufactured using premium vinyl ester resin containing UV inhibitors. The properties listed below are the result of the ASTM test method indicated.

Properties	ASTM	Units	Diameter - Threads per Inch (UNC)				
			9.5mm	12.7mm	15.9mm	19.0mm	25.4mm
Ultimate Transverse Shear (Double Shear)	B-565	Newton	18,680	30,240	44,480	59,600	106,750
Longitudinal Compressive Strength	D-695	MPa	344	344	344	344	344
Flexural Strength	D-790	MPa	482	482	482	482	482
Flexural Modulus	D-790	GPa	17.2	17.2	17.2	17.2	17.2
Flammability	D-635	Self-extinguishing for all					
Fire Retardant	Class 1						
Water Absorption (24 hr. immersion)	D-570	% max.	0.8	0.8	0.8	0.8	0.8
Longitudinal Coefficient of Thermal Expansion	D-696	10 <sup>-6</sup> mm/mm/°C	11	11	11	11	11
Ultimate Thread Shear (using fibreglass nut)	---	Newton	5,337	10,670	16,010	17,790	36,470
Ultimate Torque Strength (fibreglass nut lubricated with SAE 10W30 motor oil)		NewtonMeter	10	21	47	67	149
Rod Weight	---	Kg./m	0.104	0.119	0.297	0.447	0.789
Nut Weight	---	grams	4.5	9.1	18.1	27.2	63.6
Nut Dimensions	---	mm.(square) x mm.(thick)	17.2 x 11.4	21.8 x 14.2	26.9 x 17.5	31.5 x 20.8	41.4 x 27.9
Color	Gray						

### Typical Properties of Rod, Bar, and Flat Sheet

Below are test results for typical coupon properties of Treadwell Group's Rod, Bar, and Flat Sheet reinforced with all unidirectional longitudinal fibreglass roving. Properties are derived per the ASTM test method shown.

Properties	ASTM	Units	Rod	Bar	Flat Sheet
Tensile Stress	D-638	MPa	620.5	165.5	620.5
Tensile Modulus	D-638	GPa	34.7	27.6	34.7
Compressive Stress	D-695	MPa	413.7	344.7	344.7
Flexural Stress	D-790	MPa	689.5	620.5	689.5
Flexural Modulus	D-790	GPa	41.4	31.0	31.0
Barcol Hardness	D-2583		60	60	60
Izod Impact	D-256	J/mm	2.14	2.14	2.14
Density	D-792	gr/cc	1.80-2.07	1.80-2.07	1.80-2.07
Water Absorption (24 hour)	D-570	%	0.2	0.2	0.2

## Coupon Properties

### Typical Coupon Properties of Flat Sheet

The test results for typical coupon properties of Treadwell’s fibreglass flat sheets are shown below. Properties are obtained via the ASTM test method shown. Ultraviolet inhibitors and synthetic surfacing veils come as standard.

Mechanical Properties	ASTM	Units	Thickness					
			STD & FR			VE		
			3.2	4.8 - 6.4	9.5 - 25.4	3.2	4.80 - 6.4	9.5 - 25.4
Tensile Stress, LW	D-638	MPa	165.5	165.5	165.5	165.5	165.5	165.5
Tensile Stress, CW	D-638	MPa	51.7	68.9	68.9	51.7	68.9	68.9
Tensile Modulus, LW	D-638	GPa	13.8	13.8	13.8	13.8	13.8	13.8
Tensile Modulus, CW	D-638	GPa	6.9	7.6	9.6	6.9	7.6	9.6
Compressive Stress, LW	D-6641	MPa	165.5	165.5	165.5	165.5	165.5	165.5
Compressive Stress, CW	D-6641	MPa	106.9	113.8	113.8	113.8	120.7	120.7

**COMPARE**

	ArchitEX™	vs	Steel
Corrosion Resistance	ArchitEX™ is available in either polyester or vinylester resin for resistance to a broad range of chemicals.  Painting is beneficial in assisting with UV resistance when subjected to prolonged exposure.		Subject to oxidation and corrosion.  Requires painting or galvanizing for many applications.
Weight	Lightweight - weight 25% as much as steel. 12.7mm thick plate = 0.002295 kgf/cm <sup>2</sup>		Could require lifting equipment to move and place. 12.7mm thick plate = 0.00996 kgf/cm <sup>2</sup>
Conductivity	Low electrical conductivity properties - high dielectric capability  Low thermal conductivity 4 (BTU/SF/HR/F°/IN).		Conducts electricity. Potential Shock Hazard  Thermal Conductivity 260-460 (BTU/SF/HR/F°/IN).
Strength	ArchitEX™ has a high strength-to-weight ratio and pound-for-pound is stronger than steel in the lengthwise direction.  Tensile strength = 30 KSI , CW = 7 KSI		Homogeneous material.  Tensile strength = 60 KSI Yield strength = 36 KSI
Stiffness	Modulus of Elasticity = 2.5 MSI Will not permanently deform under working load.		Flexural modulus = 29 KSI Modulus of Elasticity = 29 MSI
Impact Resistance	Glass mats in ArchitEX™ distributes impact load to prevent surface damage. Will not permanently deform under impact.		Can permanently deform under impact.
EMI/RFI Transparency	Transparent to EMI/RFI transmissions.		Can interfere with EMI/RFI transmissions.
Versatility	Pigments added to the resin provide color throughout the part. Special colors available.		Must be painted for color. To maintain color and corrosion resistance, repainting may be required.
Easy Field Fabrication	ArchitEX™ can be field fabricated using simple carpenter tools with carbide or diamond tip blades.  Lightweight for easier erection and installation.		Often requires welding and cutting torches.  Heavier material requires special handling equipment to erect and install.
Cost	Lower installation and maintenance costs in industrial applications often equals lower lifecycle costs.		Lower initial cost.

# General Tolerances

Cross Sectional Tolerances

Shapes	Dimension	Tolerance % of Nominal	* Maximum or Minimum Tolerances

	d = depth	± 4 %	± 2.4mm max.
<p>Beams</p> 	t = thickness	± 10 %	± 0.26mm min.
	b = flange width	± 4 %	± 2.4mm max.
	d = depth	± 4 %	± 2.4mm max.
<p>Flat Sheet</p> 	t = thickness	± 15 % ± 10 %	0.25mm min 1.27mm max
	b = width	± 4 %	± 2.4mm max.

**General Tolerance**

**Cross Sectional Tolerance**

Shapes	Dimension	Outside Dimension Condition	Tolerances
Closed Shapes Round, Square and Rectangular Tubes 	t = thickness	All	0.25mm min
	od = outside dimension	All	2.39mm max
Round Rod & Square Bar 	od = outside dimension	All	2.39mm max

**Flatness**

Flatness is measured in the center with the weight of the profile minimising the deviation by contact with a flat surface

Structural Shapes Rods, Bars & Flat Sheet 	Allowable deviation from flat		
	Width	All Thickness	
	Up to 25.4mm	0.2mm	
Over 25.4mm	6.3mm		
Hollow Shapes 	Allowable deviation from flat		
	Width	Thickness under 4.8mm	Thickness 4.8mm and over
	Up to 25.4mm	0.3mm	0.2mm
Over 25.4mm	0.3mm x width	4.8mm x width	

**Straightness**

Straightness is measured in the centre with the weight of the pultrusion minimising the deviation by contact with a flat surface.

<p>Angle, Beam and C Section</p> 	<p>Allowable deviation from straight</p>		
<p>Rods and Bars</p> 	<p>Width</p>	<p>Thickness</p>	<p>Allowable deviation from straight</p>

## General Tolerance

### Twist

Twist is measured with the weight of the pultrusion minimising the twist.

Bars and other Structural Profiles other than Tubes	Allowable twist	
	0.003°/mm	
Closed Profiles (Tubes)	Allowable twist	
	0.003°/mm	

### Angularity

Angularity is the angle measured between two perpendicular faces of the profile.

All Profiles	Allowable deviation from specific angle	
	Thickness up to 19mm	2°

### Cut Lengths

All Profiles	Allowable deviation from specific length	
	up to 2.44m	0 + 6.35mm
	2.44m <= 7.32m	0 + 12.7mm
	> 7.32m	0 + 76.2mm

\*All parts being cut from stock must allow for blade width

### Squareness of Endcut

	Allowable deviation from specific length	
All Profiles	Profiles 50.8mm and under	± 2°
	Profiles over 50.8mm	± 1°

# Sectional Properties

## Sectional Properties

### Elements of Sections of Structural Shapes

The section table values on the following pages have been calculated from nominal dimensions. All shapes shown in the tables are available, but not all are stocked. A shape availability list is included in the manual and, for convenience, availability information is noted on the individual uniform load tables.

Notation	
A	cross sectional area (in. <sup>2</sup> / mm. <sup>2</sup> )
A <sub>w</sub>	area of web (in. <sup>2</sup> / mm. <sup>2</sup> )
b	width of section (in. / mm.)
d	depth of section / diameter of rod (in. / mm.)
h	depth between flanges (in. / mm.)
I	moment of inertia (in. <sup>4</sup> / mm. <sup>4</sup> )
J	torsion constant (in. <sup>4</sup> / mm. <sup>4</sup> )
od	outside diameter of tube (in. / mm.)
r	radius of gyration (in. / mm.)
S	section modulus (in. <sup>3</sup> / mm. <sup>3</sup> )
t	thickness (in. / mm.)
t <sub>b</sub>	thickness of width dimension (in. / mm.)
t <sub>f</sub>	thickness of flange (in. / mm.)
t <sub>d</sub>	thickness of depth dimension (in. / mm.)
t <sub>w</sub>	thickness of web (in. / mm.)
Wt.	weight of section (lbs./ft. / kg./m.)
C <sub>x</sub>	x coordinate of centroid (mm.)
C <sub>y</sub>	y coordinate of centroid (mm.)

**Sectional Properties - C Section**

The section values shown on this page have been calculated from the nominal dimensions of the profile. All the shapes listed in the table are available but not all are stocked. For information on availability and price, contact Treadwell Group on 1800 246 800.

# Beams - Allowable Uniforms Loads

## Beams - Allowable Uniform Loads

## Allowable Uniform Load Tables

Full section 3-point bending tests were conducted on Treadwell Reinforced Plastics' H-Beams, I-Beams, C Section and Square Hollow Section. The allowable uniform load tables were generated using these tests results as well as the formulas, properties, and assumptions listed below. Formulas for critical buckling and lateral-torsional buckling developed from theory are presented in Chapter 6 and 7 of the ASCE Structural Plastics Design Manual.

Notation	
$A_w$	area of web (in. <sup>2</sup> / mm. <sup>2</sup> )
$b$	flange width (in. / mm.)
$b_c$	C Section flange minus thickness (in. / mm.)
$b_h$	1/2 of flange width (in. / mm.)
$d$	depth of section (in. / mm.)
$E$	modulus of elasticity (lbs. / in. <sup>2</sup> / GPa)
$f_b$	actual flexural stress (lbs. / in. <sup>2</sup> / MPa)
$F_b$	maximum allowable flexural stress (lbs. / in. <sup>2</sup> / MPa)
$F_{aCB}$	maximum allowable buckling stress (lbs. / in. <sup>2</sup> / MPa)
$F_{aLTB}$	maximum allowable lateral-torsional buckling stress (lbs. / in. <sup>2</sup> / MPa)
$f_v$	actual shear stress (lbs. / in. <sup>2</sup> / MPa)
$F_v$	maximum allowable shear stress (lbs. / in. <sup>2</sup> / MPa)
$G$	shear modulus (lbs. / in. <sup>2</sup> / GPa)
$I$	moment of inertia (in. <sup>4</sup> / mm. <sup>4</sup> )
$J$	torsion constant (in. <sup>4</sup> / mm. <sup>4</sup> )
$L$	length of span (in. / mm.)
$M$	maximum moment (lbs.-in. / N.-m.)
$S_x$	section modulus (in. <sup>3</sup> / mm <sup>3</sup> )
$t$	flange thickness (in. / mm.)
$V$	vertical shear force (lbs. / N.)
$w$	uniform load (lbs./in. / N/m.)
$\nu_t$	poission's ratio (longitudinal)
$\nu_r$	poission's ratio (transverse)

## Assumptions

- Beam simply supported at both ends
- Uniformly distributed load
- Load is applied perpendicular to major axis
- Part weight has been deducted in tables
- Safety factor of 3.0 for both ultimate material flexural and shear stress and 2.5 for buckling stresses
- Higher safety factors may be required for permanent loading, impact loading or high temperature consideration.

**Beams - Allowable Uniform Loads**

Properties / Allowables	Formulas
E = 2.8 x 10 <sup>6</sup> lbs./in. <sup>2</sup> E = 19.3 GPa	$\Delta = \frac{5wL^4}{384EI} + \frac{wL^2}{8A_wG}$
G = 450,000 lbs. /in. <sup>2</sup> G = 3.1 GPa	$f_b = \frac{M}{S_x}$
F <sub>b</sub> = 10,000 lbs./in. <sup>2</sup> F <sub>b</sub> = 68.9 MPa	
F <sub>v</sub> = 1500 lbs./in. <sup>2</sup> F <sub>v</sub> = 10.3 MPa	$f_v = \frac{V}{A_w}$

Allowable Critical Buckling Stress for laterally supported WF and I Beams

$$F_{aCB} = \frac{\pi^2}{b_h^2 t} \left[ .935 \sqrt{\left(\frac{Et^3}{12\lambda}\right)\left(\frac{V_T Et^3}{12\lambda}\right)} - (.656)\left(\frac{V_T Et^3}{12\lambda}\right) + (2.082)\left(\frac{Gt^3}{12}\right) \right] / 2.5$$

$$\lambda = (1 - V_L V_T)$$

Allowable Lateral-Torsional Buckling Stress for laterally unsupported WF and I Beams

$$F_{aLTB} = \left[ \frac{C \pi}{S(KL)} \sqrt{E I_y GJ + \frac{d^2 \pi^2 E^2 I_y^2}{(4)(KL)^2}} \right] / 2.5$$

C = 1.13 and K = 1.0 for uniform load simple beam\*

Allowable Critical Buckling Stress for C Sections laterally supported to eliminate warping and twist

$$F_{aCB} = G(t/b_c)^2 / 2.5$$

Allowable Bending Stress for Square Tube (b/t <=16)

$$F_b = 10,000 \text{ psi.}$$

C mm. Deflection for Concentrated Load

# Columns

## Columns

Full section column testing was conducted on Treadwell Group’s Equal Leg Angles, I-Beams, WF-Beams, and Square Hollow Section. Ultimate stress vs. slenderness ratio curves were developed from the testing. The curves developed are based on the Euler Buckling Stress Equation and a straight line transition from Euler Buckling to ultimate stress

$$\left[ \pi^2 E / \left( \frac{K}{r} \right)^2 \right]$$

The allowable concentric axial load tables were generated from these curves. The tables are based on a safety factor of three.

Notation	
A	area (mm. <sup>2</sup> )
b	width of flange/leg/wall ( mm.)
t	thickness of flange ( mm.)
r	minimum radius gyration ( mm.)
l	length (m.)
K	effective column length factor
F <sub>a</sub>	allowable column concentric axial stress (MPa)
P <sub>a</sub>	allowable column centric axial load (N.)

Angle	Maximum allowable stress	
	b/t = 6	41.3MPa
	b/t = 8	33.5MPa
	b/t = 10.7	24.1MPa
	b/t = 12	19.5MPa
	b/t = 16	12.6MPa

WF- & I-Beam	Maximum allowable stress	
	b/t ≤ 12	68.9MPa
	b/t = 13.3	68.9MPa
	b/t = 16	50.5MPa
	b/t = 20	32.3MPa
	b/t = 21.3	28.4MPa
	b/t = 24	22.4MPa
	b/t = 26.7	18.1MPa

Square Hollow Section (6.35mm wall)	Maximum allowable stress	
	b/t ≤ 16	68.9MPa

## SPACE GASS Input Guide

### SPACE GASS Input Guide

With the increasing popularity of SPACE GASS with the engineering and planning community at large, Treadwell is aware that it essential to aid users and make usage of this multi-purpose 3D analysis and design program simpler with our product guide. Instructions are tabulated step by step below on how to use our tables with the program.

#### Instructions

Under the Section segment:

On the second line:

1. **A** refers to Cross Sectional Area found in all products under Sectional Properties.
2. **J** refers to Torsion Constant found in all products under Sectional Properties.
3. **I<sub>y</sub>** refers to moment of inertia about the Y axis found in all products under Sectional Properties.
4. **I<sub>z</sub>** refers to moment of inertia about the X axis found in all products under Sectional Properties.
5. **A<sub>y</sub>** refers to shear area. This can be left as zero.
6. **A<sub>z</sub>** refers to shear area. This can be left as zero.
7. **Alpha** does not need to be altered.
8. **Mark** refers to section mark. This is not important for design.

Under the Material segment:

1. The first box refers to the material number.
2. The second box refers to the material name.
3. E refers to the Modulus of Elasticity found on pages 10 & 12 under Coupon Properties.
4. Poisson's refers to the Poisson's Ratio of FRP which is 0.23.
5. Mass Density refers to Density found on pages 10 & 12 under Coupon Properties.
6. Temp. Coefficient refers to the Coefficient of Thermal Expansion, LW, found on pages 10 & 12 under Coupon Properties.
7. F'c refers to the compressive strength of concrete which is 0.

# Corrosion Guide

## Corrosion Guide

Information contained in this guide is based on data collected from several years of actual industrial applications. Recommendations are based on conservative evaluations of the changes which occur in certain properties of replicate laminates after exposures of one year or longer, both in the laboratory and the field.

Temperatures are neither the minimum nor the maximum but represent standard test conditions (Room Temperature & 70°C). The products may be suitable at higher temperatures but individual test data should be

required to establish such suitability. Contact Treadwell for any special applications that you may have.

The recommendations (• : resistant – :not resistant) contained in this specification sheet are made without guarantee or representation as to results. We suggest that you evaluate these recommendations and suggestions in your own laboratory or actual field trial prior to use. Our responsibility for claims arising from breach of warranty, negligence, or otherwise **is limited to the purchase price of the material.**

## **TREADWELL**

Treadwell Access Systems, EX-Series®, GratEX®, MoultrEX® and ArchitEX™ are all registered brands of Treadwell Group Pty Ltd. All pictures and information are supplied as a guide only. The complete range of Treadwell products are developed, refined and made to meet and exceed stringent specifications for the worldwide market.

Important Note: Sales of products are subject to our Terms and Conditions which are available upon request. All specifications and photos are a guide only and are subject to change without notice. Please ring to confirm details. Treadwell products only comply with relevant standards mentioned within this publication when installed and used as they are designed to be.
